

# Digitally-enabled behaviour change for sustainable mobility

DyMoN Webinar Series, 07.12.2023

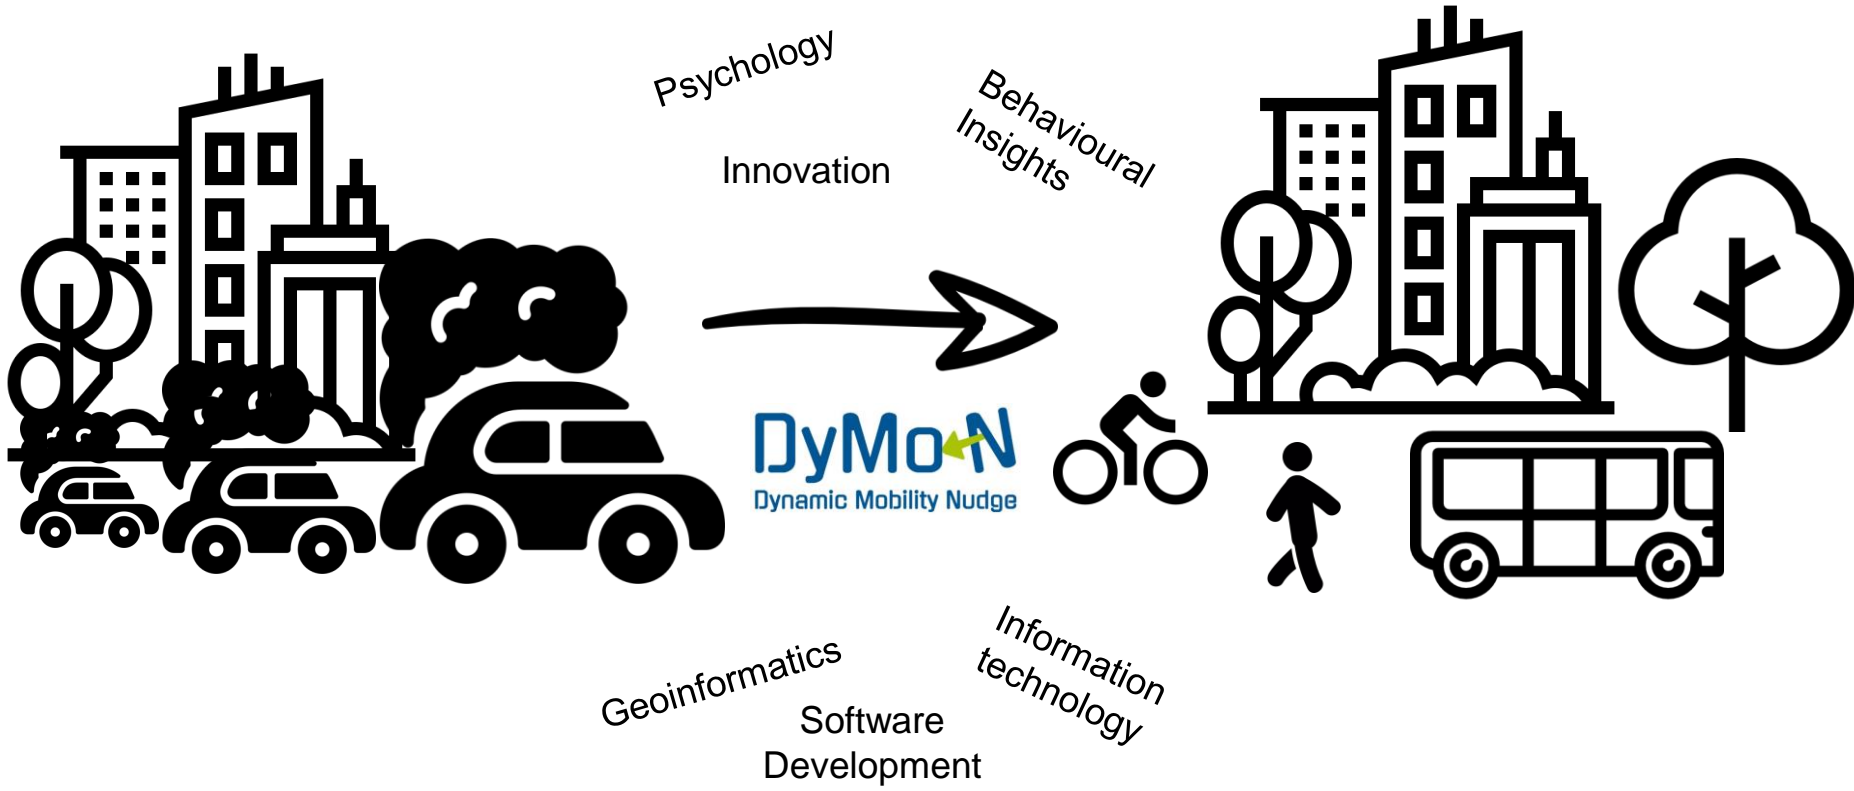

*Presenters:* Dr. Claudia Luger-Bazinger & David Leistner, BSc  
Salzburg Research (Austria)

# Content of this webinar

- **Introduction** to the project
- **Enabling behaviour change in the digital environment** by Claudia Luger-Bazinger, project coordinator, Salzburg Research
- **Working with digital nudging for sustainable mobility** by David Leistner, Salzburg Research
- **Q&A**

# Idea of the DyMoN Project

- **‘Hard’ interventions** for sustainable mobility (e.g. laws) only go so far
- **Effective ‘soft’ interventions needed for support** (motivation, social norms, etc.)
- **European research project DyMoN offers digital, data-based behavioural interventions** (‘nudges’) to foster sustainable mobility
- Psychology + geoinformatics + software development = **interdisciplinary approach**
- **Webinar series about results, insights, highlights and challenges** of this project

# Enabling behaviour change in the digital environment

**Even if we want to... change is hard.**

Do you remember your last New Year's resolution?  
What helped you in achieving it – or what would have helped?

# Nudging

- Nudging is a **method to guide behaviour into a certain direction** (stems from psychology, behavioural economics)
  - Freedom of choice is still preserved, no bans on options
  - One method of **behavioural interventions**
- Decisions and behaviour depend on many factors (habits, routines) and are **not always rational**
- **Change of environment** in which decisions are made („choice architecture“), e.g. new information or presenting options differently
  - **Defaults**
  - **Social comparison**
- **Digital nudging** = using nudging in a digital form to influence decisions in the physical environment

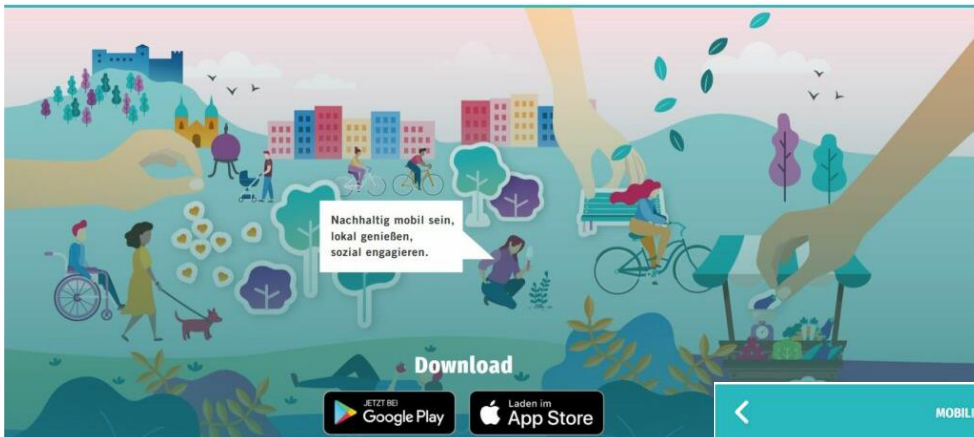

# Digital nudging with mobile apps

- **Mobile apps / digital tools** to guide behaviour and to **support behaviour change** (e.g. in fitness and sports)
  - Digital behavioural interventions – rewards, reminders, goal setting etc.
- **Urban mobility apps** → want to motivate switch from individual car use to bicycling, public transport, walking
- **Examples for digital behavioural interventions in urban mobility apps:**
  - Vouchers for kilometers bicycled
  - Gamified elements as incentives
  - Leaderboards

## Mobilitäts Tracker

Jeder Kilometer den du – egal ob mit dem Tracker oder in anderen Aktivitäten unterwegs bist – wird in Herzschläge für deine Stadt verwandelt.

1km = 1

FORTSCHRITT

0 KM 00:00 H

Mehr Details findest du im Profil.

- Ich habe überlegt, diese Strecke mit dem **Auto** zu fahren.
- Ich habe überlegt, diese Strecke mit dem **Bus** zu fahren.

START

SimpliCITY

STADT DATEN

Schau, was wir gemeinsam in der Stadtmacherei schon erreicht haben. Den Fortschritt zu den Challenges findest Du im Bereich Aktivitäten.

AKTUELL STEHEN WIR BEI INSGESAMT 12547 HERZSCHLÄGEN.

Gemeinsam sind wir der Herzschlag der Stadt.

## Fräulein Flora Tour

Salzburg kann auch urban. Wir zeigen euch gut versteckte Orte, an denen sich Salzburg ganz und gar nicht nach Kleinstadt anfühlt und an denen junge Menschen an Alternativen für eine saubere und lebenswerte Zukunft tüfteln. Also: schwingt euch aufs Rad und macht euch auf die Suche nach den Plätzen.

8000 M 120 MIN

# Analysis of urban mobility apps

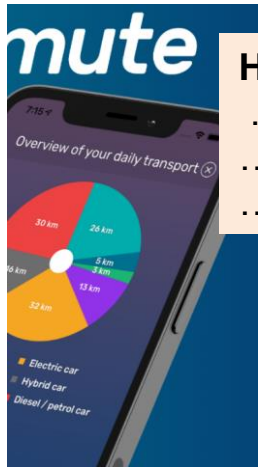

- **Goal:** Overview of **commonly used digital behavioural interventions for sustainable mobility**
- **Mobile applications** that seek to encourage **more sustainable mobility choices** (not just schedules), but
  - promotion of sustainable urban mobility (e.g. GHG emission data, gamification)
- **Search** in Google Play Store and Apple App Store (**July – September 2022**)
- **26 apps** fit search criteria (228 cities and 18 different countries)

# Top behavioural interventions used in urban mobility apps

1

Feedback & monitoring

2

Rewards (gamifications)

Awesome rewards

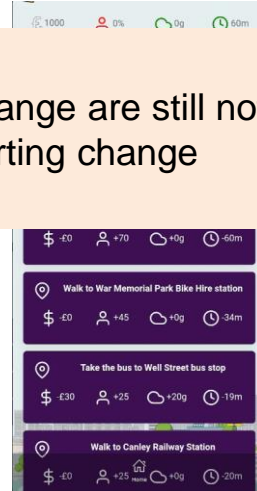

3

Planning

4

Reminders & prompts

5

Knowledge about consequences

However...

- ... psychological models of behaviour change are still not commonly used
- ... this could also limit potential for supporting change
- ... many more interventions available

# DyMoN Nudging Repository I

- **List of digital nudges to motivate bicycling, walking, public transport**
  - Mainly used as notifications within already existing apps
  - For commuting and leisure
- **Situational factors** as additional, crucial context elements for digital nudges
  - weather forecast, infrastructure, traffic situation, bikeability, walkability, ...
  - these factors determine the content and timing of nudges
- **Similar to just-in-time adaptive interventions** from health field
  - **Unique to the mobility field** so far

# DyMoN Nudging Repository II

- Based on model of behaviour change (COM-B model), transferred into mobility field
- Nudges from **co-creation** with citizens
  - No concerns about ethics with this repository, but focused on data privacy
- **166 digital nudges**
- **16 groups / clusters** of behaviour change methods (e.g. shaping knowledge, associations)
- **46 different behaviour change techniques / interventions** (e.g. instruction on how to perform a behavior, social comparison)
- Possibility to use **nudges without data** (no situational context, but timed schedule of suitable nudges)

# Nudging repository - examples

- Information about emotional consequences 
  - Imagine how proud you will be today if you bicycle to work, even if the weather is not perfect!
- Self-reward 
  - Here's a suggestion: If you walk to work today in the rain, you have definitely earned a reward! Maybe some nice coffee, a slice of cake - or both?

## How a digital nudge is categorised in the nudging repository:

Nudge text (for push notification)	Imagine how proud you will be today if you bicycle to work, even if the weather is not perfect!
COM-B element	Motivation
Behavioural intervention	Information about emotional consequences
Description	Provide information (e.g., written, verbal, visual) about emotional consequences of performing the behaviour
Mobility Mode	Bicycling
Situation-aware?	Yes
Situational information that determines sending out the nudge	Weather forecast for current day: rainfall. For user location: good bicycle lanes / good bikeability, reasonable bicycling distance to destination.
Trip purpose	Commuting
Timeframe for nudge	Weekday mornings

ABOUT THE PROJECT

# COM-B model of behaviour

- C: Psychological and physical **capabilities**
- O: Social and physical **opportunities**
- M: **Motivational** processes
- B: resulting **behaviour**

# Examples of behavioural interventions for sustainable mobility

## Target Opportunity:

- Giving out free tickets to public transport
- Offering attractive bicycle infrastructure, such as bicycle storage options

## Target Motivation:

- Offering incentives if car is not used (e.g., giving out vouchers)
- Launching a campaign in a neighbourhood to engage families to walk or bicycle together

## Target Capability:

- Giving bicycle lessons to people who were not able to do so before
- Making bus schedules easier to understand and more accessible

# Situation-aware digital nudging

- inclusion of relevant context
  - Example: weather, traffic, bikeability/walkability
- ⇒ personalized nudges perceived as more relevant
- possible through data hub and Nudging Repository (more detail in next session)

# Examples for situation-aware nudges

## Persona A: Michaela

- 4km to work, usually driven by car
- Bad public transport connection
- Unpleasant/unsafe neighbourhood
- New bicycling network

„Walk to work. Daily physical activity improves your health“

„Take the bus. There is a connection to your destination“

„Enjoy riding through nature and save time. Take your bike to work!“

**Personas: Who are the target users you wish to reach with your efforts?**

Canvas: Information for situation-aware nudges

Information needed 	Purpose 	Importance (on a scale from 1= not important to 5 = very important) 	Possible data source 
Weather forecast for next day	Informing about good weather ahead and suggesting commuting by bicycle	5	Open Data Weather [2023].
Green walkways within cities	Suggesting the most enjoyable walks to users	3	Open Street Map [2022]

Which stakeholders are needed to realise your sustainable urban mobility campaign?

Sustainable urban mobility campaigns in your city: What do you face?

What would the ideal mobility nudging app look like for you?
